

SPCC Plans for Hazardous Matter

The following is a list of the required elements for a Hazardous Matter Spill Prevention, Control and Clean-up (SPCC) Plan, as specified under 38 M.R.S.A. section 1318-C:

- A. The hazardous matter and substances covered including the reportable quantity for each hazardous matter and mixture measured in pounds if a solid and in gallons if a liquid.
- B. Any containment and diversionary structures or equipment where appropriate.
- C. Inspection, maintenance and testing procedures for storage and containment areas.
- D. A list of emergency response equipment and locations and a description of the capabilities of the equipment.
- E. A description of employee training programs.
- F. A description of areas in need of protection and method of protection.
- G. A description of discharge detection devices and emergency warning systems.
- H. A list of on-site emergency coordinators and the qualifications of on-site trained employee responders.
- I. A description of evacuation procedures and assembly points.
- J. Notification procedures for federal, state and local officials.
- K. Procedures for supplying written reports to the department.
- L. General response and clean-up protocols by substance or substance class.
- M. Specific on-site containment, treatment or removal plans.
- N. A description of the record-keeping process for responses involving the implementation of this plan.
- O. A description and copies of mutual aid agreements and any agreements with clean-up contractors.
- P. A promulgation statement and date of plan adoption.
